### DETAILED ACTION

## Response to Arguments

- Applicant's arguments with respect to claims 1-4, 6-8, 19, 21-25, and 27-34 have been considered but are moot in view of the new ground(s) of rejection.
- (a) Applicant argues that the prior art does not teach the newly amended feature.

The Examiner has brought in Goldszmidt (6195680) to teach the newly amended feature.

### Claim Rejections - 35 USC § 103

- The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary sidell in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- Claims 1-4, 6-8, 19, 21-25, and 27-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hokanson (6094680) in view of Goldszmidt (5999351).

As for claim 1, Hokanson teaches:

A server configured to distribute requested video assets to requesting user equipment via the access network (col. 3, lines 1-5), the server comprising;

a manager for managing migration of video assets, wherein the manager tracks asset request rates and threshold rates of respective video assets (col. 2, lines 42-48, col. 6, lines 35-45);

Art Unit: 2421

wherein the manager (70, 72), in response to an infrequently requested video asset becoming frequently requested, is configured to select and transmit the frequently requested video asset to at least one primary partitions of at least one server (Hokanson teaches the hierarchical use of various mediums for storage of the video assets where each of the video assets are prioritized within a storage hierarchy. This hierarchical structure of different memories can be treated as the equivalent of Applicant's partitioning of the storage between primary and secondary partitions; col. 2, lines 55-60, col. 3, lines 23-30, col. 9, lines 43-47, lines 55-67);

wherein the manager, in response to a frequently requested video asset becoming infrequently requested, is configured to select and transmit the infrequently requested video asset to at least one secondary partition of at least one server, and removing the infrequently requested video assets from the primary partitions (col. 6, lines 35-45, col. 9, lines 43-47, lines 55-67);

However, Hokanson fails to disclose:

Infrequently requested content is stored in at least two servers;

Frequently requested content is stored in at least one but less than all of the servers:

In an analogous art, Goldszmidt discloses:

Infrequently requested content is stored in at least two servers (col. 4, lines 26-54, col. 5, lines 33-45, col. 7, lines 10-22, col. 8, lines 27-33);

Frequently requested content is stored in at least one but less than all of the servers (Goldszmidt discloses load balancing in order to provide a god balance of

Art Unit: 2421

server availability. The control server redirects user requests to servers that can provide the multimedia requested. In the event that there is a server failure or content overload, the control server redirects the client to the secondary server which also provides the same multimedia. Hence, Goldszmidt discloses that the same content is stored in at least two servers, and that the same content is stored in at least one but less than all of the plurality of servers. col. 4, lines 26-54, col. 5, lines 33-45, col. 7, lines 10-22, col. 8, lines 27-33);

As for claim 2, the modified Hokanson discloses the manager is configured to identify an infrequently requested video asset as becoming frequently requested when the asset request rate crosses above the threshold rate; the manager is configured to identify a frequently requested video asset as becoming infrequently requested when the asset request rate crosses below the threshold rate (A threshold is inherent in the distinction between content requested by a "large number of subscribers" and content that is "rarely" requested; see Hokanson: col. 2, lines 55-60, col. 3, lines 23-30, col. 9, lines 43-47. lines 55-67, col. 6, lines 35-45).

As for claim 3, the modified Hokanson teaches in response to receiving a request for a video asset, the manager is configured to control distribution of the requested video asset from one of the server identified as storing the requested video asset to the requesting user equipment (see Hokanson: col. 3, lines 1-11, col. 7, lines 35-42).

Art Unit: 2421

As for claims 4 and 22, the modified Hokanson discloses:

a content manager for receiving the request for the video asset and determining whether the requested video asset is stored locally in the storage of that headend at which the video asset request is received or stored remotely in the storage of a different head-end (see Hokanson: col. 7, lines 25-42);

a stream session manager, for directing the associated server to distribute streams of video assets to subscriber equipment requesting said the video assets (see Hokanson: col. 7, lines 25-42);

a content session manager for responding to video asset requests forwarded from managers of other server (see Hokanson: col. 7, lines 25-42).

As for claims 6 and 27, the modified Hokanson discloses wherein a content manager of the local server at which a video asset request is received, in response to determining that a requested video asset is stored locally, is configured to notify the stream session manager to deliver the requested video asset by the local server to the requesting subscriber equipment via the access network (see Hokanson: col. 7, lines 57-67).

As for claim 7, the modified Hokanson teaches wherein the content manager of a local head-end at which a video asset request is received, in response to determining that a requested video asset is stored remotely in the storage of a remote head-end.

Art Unit: 2421

instructs the stream session manager of the local head-end to contact the content session manager of the remote head-end (see Hokanson: col. 7, lines 25-42).

As for claim 8, the modified Hokanson teaches wherein the content session manager of the remote head-end identifies the requested video asset in the storage of the remote head-end, allocates bandwidth for transmitting the requested video asset, and, in response to a determination that the requested video asset is to be provided from the remote head-end to the requesting subscriber equipment via the local head-end, notifies the server of the remote head-end to transmit the requested video asset to the local head-end using the inter-server network (see Hokanson: col. 7, lines 25-42).

Claim 19 contains the limitations of claim 1 which is rejected under Hokanson in view of Goldszmidt. Claim 19 additionally calls for the following:

Receiving at a server an indication whether asset request rates for a plurality of video assets stored in a plurality of servers exceeds respective threshold rates for the plurality of the video assets (see Hokanson: col. 2, lines 42-48, col. 6, lines 32-45);

In response to an infrequently requested video asset becoming frequently requested, selecting and transmitting the frequently requested video asset to at least one primary partition of each of the plurality of servers, wherein each server serves as a locals server to a respective group of user equipment devices via an access network and a remote server to at least one other group of user equipment devices (Hokanson teaches locally storing (caching) movie information once it becomes highly requested.

Art Unit: 2421

This occurs when a new release of a movie occurs. When a movie is newly released, it is stored locally at all servers since a high number of users request the movie information all across the country. It is unlikely that only certain locations would only request a highly anticipated newly released movie. As a result, the movie information is locally cached at all servers. Any of these servers is remotely accessible by another group of users. col. 2, lines 55-60, col. 3, lines 23-30, col. 9, lines 43-47, lines 55-67);

Claim 21 contains the limitations of claim 1 which is rejected under Hokanson in view of Goldszmidt.

As for claim 23, the modified Hokanson discloses wherein the identified headend is the local head-end coupled directly to the requesting subscriber equipment, the local head-end provides the requested video asset to the requesting subscriber equipment via the access network (see Hokanson: col. 7, lines 58-67)

As for claims 24, the modified Hokanson discloses wherein, the identified headend is one of the remote head-ends, the local head-end requests the requested video asset from the remote head-end and the remote head-end provides the requested video asset to the local head-end via an inter-server network (see Hokanson: col. 7, lines 25-42).

Art Unit: 2421

Claim 25 contains the limitations of claims 1 and 4 which is rejected under Hokanson in view of Goldszmidt

As for claim 28, the modified Hokanson discloses wherein, the identified headend is one of the remote head-ends, the local head-end requests the requested video asset from the remote head-end and the remote head-end provides the requested video asset to the local head-end via an inter-server network (see Hokanson: col. 7, lines 25-42).

As for claim 29, the modified Hokanson discloses wherein the content session manager of the remote head-end identifies the requested video asset in the storage of the remote head-end and allocates bandwidth for transmitting the requested video asset (see Hokanson: col. 8, lines 1-17).

As for claim 30, the modified Hokanson teaches in response to a determination that the requested video asset is to be provided from the remote head-end to the requesting subscriber equipment via the local head-end, the content session manager of the remote head-end notifies the server of the remote head-end to transmit the requested video asset to the local head-end (see Hokanson: col. 8, lines 1-17).

As for claim 31, the modified Hokanson teaches in response to a determination that the server of the local head-end is available to receive the requested video asset from the remote head-end, the server of the remote head-end streams the requested video asset to the local head-end over the inter-server network (see Hokanson: col. 8.

lines 1-17).

As for claim 32, the modified Hokanson teaches wherein the server of the local

head-end received the requested video asset from the server of the remote head-end,

wherein the received video asset is stored in the storage of the local head-end (see

Hokanson: col. 7, lines 57-67).

As for claim 33, the modified Hokanson teaches in response to a determination

that the requested video asset is to be provided directly from the remote head-end to

the requesting subscriber equipment, the content session manager of the remote head-

end requests the stream session manager of the remote head-end to allocate

bandwidth for providing the requested video asset to the requesting subscriber

equipment (see Hokanson: col. 8, lines 1-17).

As for claim 34, the modified Hokanson teaches wherein the stream session

manager of the remote head-end notifies the server of the remote head-end to stream

the requested video asset to the requesting subscriber equipment (see Hokanson: col.

8, lines 1-17).

Conclusion

Art Unit: 2421

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to SUMAIYA A. CHOWDHURY whose telephone number is (571)272-8567. The examiner can normally be reached on Mon-Fri, 9-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kristine Kincaid can be reached on (571) 272-4063. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
